//note="vector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: Xho I; Filarial nematode parasite of humans. Third-stage larvae, L3, were isolated from infected black flies in Cameroon (forest strain). The L3 were cultured in 20% FCS in INDM+ NOTC 135 and collected after day 1, 2, or 3 in culture. L3 of O. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 1005 independent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         genome@smith.edu

                                                                                                                                        /note="vector: lambdaZapII (UniZap XR); Site_1: Eco R I (5' end); Site_2: Xho I (3' end); Brugia malayi is a lymphatic filarial nematode parasite of humans. mRNA was prepared from third stage larvae of Brugia malayi isolated from the peritoneal cavity of jirds six days after infection. The mRNA was converted to double stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNApol I. The library had 2 x 10E5 independent recombinants and average insert size was 900 base pairs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Wanlewski in the Laboratory of Dr. S. A. Williams.

Claim 4; Page 18; 28pp; English.

The sequence was deduced from a cDNA insert from pAE-III-202-4 (FERM BP-3172). The vector serves as source for a DNA fragment encoding PHL for the construction of an expression vector for the prepn. of recombinant PHL. The protein may be truncated to comprise only residues 383-706 or 383-713. The PHL catalyses the reaction: R-GlyOH -> R-NH2. It can be used to produce peptides with amidated C-termini, e.g. calcitonin, growth hormone, LH-RH. Sequence 935 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (CIBA ) CIBA GEIGY AG.

Disclosure; 7pp; English.

Plasmid pXA799 contains a sequence derived from Xenopus laevis.

Plasmid was screened from an E.coli library using plasmid pXA457
The plasmid was screened from an E.coli library using plasmid pXA457
to screen a larger library.

Although the gene product is similar to that of pXA457 at the N-terminus, lithas an area of hydrophobic elements suggesting a membrane function.

Disclosure; Page 10-15; 19pp; English.
3mu-1S cells (i.e. CHO cells expressing a peptidyl C-terminal alpha-amidase enzyme (AE)) were suspended in F-12 medium to which aliquots of trichostatin were added. Cells were cultured for 3 days at 37 deg and then assayed for AE. Without trichostatin, AE productivity was 708 U/ml. At 10, 50, 100 and 200 nM trichostatin, AE productivities were respectively 866, 1897, 1894 and 3359 U/ml.

This sequence represents the feline infectious peritonitis 1 virus (FIPV-I) spike protein. The FIPV-I spike protein may be used in the production of a vaccine for the prevention and treatment of FIPV-I infection. The spike protein may be produced by transforming a host that the spike protein DNA and expressing the sequence such sequence 1464 AA;

faeces or patient samples Disclosure; Fig 7; 165pp; English. Disclosure; Fig 7; 165pp; English. This is the amino acid sequence of the protein encoded by the wbdM gene of a gene cluster (see X06748) involved in the biosynthesis of the Escherichia coli Olll O antigen. The protein shows high

Nucleic acid molecules specific for bacterial polysaccharide antigens - useful for detecting specific strains in, e.g. for

in, e.g. food

The use of nucleic acid molecules derived from particular assembly and transport genes, particularly wold (transferase), wzx (flippase) and wzy (polymerase) genes, within 0 antigen gene clusters improves the specificity of methods for the detection and identification of 0 antigens, e.g. in testing food- or faecal-derived samples, or samples from patients. The 0 antigen is a major virulence factor of enteropathogenic E. sequence 374 AA;

Claim 11; Fig 10a-b; 154pp; English.

Novel yeast SRB (suppressor of RNA polymerase B) proteins SRB4, SRB5, SRB9, SRB9 and SRB11 (W13821-28) are transcription regulatory factors that act as positive and negative regulators of RNA polymerase II activity, and are components of the RNA polymerase II activity, and are components of the RNA polymerase II clentify transcription factors involved in RNA polymerase II

C-terminal domain (CTD) function. SRB8 and SRB9 appear to repress CTD activity. Genomic clones (T59904-11) for the SRB appear to repress CTD activity. Genomic clones (T59904-11) for the SRBs have been obtd. SRBs can be used to treat diseases resulting from alteration or deletion of the SRB gene, pref. by gene transfer technology. They copds. that modify gene transcription of DNA and to identify Sequence 1226 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Align seg 1/1 to: W13825
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Percent Similarity:

CDNA libraries were prepared from human thyroid gland poly(A) RNA cDNA libraries were prepared from human thyroid gland poly(A) RNA in lambda gtll and gtl0. These were screened using probes derived from DNA encoding similar enzymes in Xenopus laevis. Three clones were isolated from the gtl0 library, including gtl0chr2.

Restriction analysis indicated that gtl0chr2 encoded a different type of enzyme to one of the other two clones. The DNA can be inserted into vectors for expression in E.coli or (more efficient.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The enzyme is useful for prodn. of physiologically active alpha-amidated peptides from their C-glycyl precursors. CDNA libraries were prepared from human thyroid gland poly(A) RNA in labraries were prepared from human thyroid gland poly(A) RNA in lambda gt11 and gt10. These were screened using probes derived from DNA encoding similar enzymes in Xenopus laevis. Three clones were isolated from the gt10 library, including gt10chT101.

Restriction analysis indicated that gt10chT101 encodes a different type of enzyme to one of the other two clones. The DNA can be type of enzyme to one of the other two clones.

CDNA libraries were prepared from human thyroid gland poly(A) RNA ibraries were prepared from human thyroid gland poly(A) RNA in lambda gtll and gtll. These were screened using probes derived from DNA encoding similar enzymes in Xenopus laevis. Three clones were isolated from the gtll library, including gtllothT201. Restriction analysis indicated that gtllothT201 encodes a different type of enzyme to the other two clones. The DNA can be inserted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This enzyme is useful for prodn. of physiologically amidated peptides from their C-glycyl precursors. CC designated pTPKS100. Splicing of the introns from the DNA sequence and translation of the 9114 nt ORF results in a protein of 3038 AAs (R74171) with a mol. wt. of 269,090 cd altons. Inspection of the TPKS AA sequence for active claim of 3038 AAs (R74171) with a mol. wt. of 269,090 cd altons. Inspection of the TPKS AA sequence for active contraction of site synthases and fatty acid synthase (FAS) activities polyketide synthases and fatty acid synthase (FAS) activities cresulted in the identification of candidates for expected sites (see FT). Except for the presence of a methyl transferase, not present in FAS, the succession of activities on the TPKS protein is the same as that observed for the rat FAS
                                                                                                                                                                                                                            Align seg 1/1

                                                                                                                                                  expression vector. The AEE encoded is used as a catalyst in the conversion of a peptidyl substrate to a corresp. peptidyl amide. This can be used for making a protein biologically active, e.g. calcitonin or growth hormone releasing factor. See also Q05637. Sequence 944 AA;
                                                                                                                                                                                                                          The corrsp. DNA sequence hybridises, under stringent conditions, with a DNA sequence (I) which encodes an alpha amidating enzyme (AEE) and is foreign to the host cell into which it is transformed. (I) is connected to a promoter and is contained in an expression vector. The AEE encoded is used as a catalyst in the

CC sequences of Type A and Type B are substantially identical with the CC exception of an intron region from bases 1178-1492 (CDS) of the CC Type B cDNA. SQ Sequence 944 AA;
CC pref. between posns. 2340 and 2690 (counting from the CDS). This CC results in the expression of an 87 rather than a 105 kD prod. The
CC includes a membrane spanning domain which may be undesirable in a CC recombinant DNA expression system, possibly inactivating the enzyme. CC A stop codon can be placed unstream of the domain-encoding sequence.
CC of other recombinant polypeptides such as calcitonin. The sequence
CC be divided into distinct types, the sequence below being encoded by CC Type B. (Type A is given in R10322). The sequence can be inserted to the correction when the correction of the correction with the correction of the correction with the correction of the correction with the correction of the correction of the correction with the correction of the
CC derived cell lines such as TVT 10028. The church form this control of the country of the country the c
PT Expression systems for antiating enzyme - comprises proxaryotic PT or entraryotic hosts contg. a recombinant expression vector contg. PT the corresp. DNA sequence.

CT The present sequence is a segment of the desmosomal cadherin (DC), CC desmoglein Dsg2, which is exposed on the surface of epithelial or Carcinoma cells and not bound to desmosomes. An antibody (Ab) of the carcinoma cells and not bound to desmosomes and the used to CC diagnose, i.e. to detect carcinoma cells, especially micrometastases, not bound to desmosomes, to separate, enrich or CC detect living or fixed carcinoma cells by cell sorting methods and CC as a therapeutic to deliver agents, e.g. other Ab or toxins, to CC carget cells. The Ab provides rapid and reliable detection of CC metastatic carcinoma, and detects parts of DC that are not accessible in desmosome bound cells, as in normal tissue or

ToDNA sequence - coding for peptide C terminal amidation enzyme butd. from horse.

Tobtd. from horse.

S Claim 1; Fig 1; 18pp; Japanese.

The sequence was deduced from the DNA sequence determined from a clone isolated from a library prepd. from mRNA extracted from a clone strium tissue. The sequence is one of four similar ones horse atrium tissue. The sequence up to residue 809 at provided which all have the same sequence up to residue 809 at which point they diverge, having different C-termini. The different termini are created by deletions in the last portion of DNA (see feature table).

Sequence 973 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 493
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      443
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           415
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        409
